INNOVATORS IN HOLE PUNCHING TECHNOLOGY

1st December 2008

SPECIALISED NOTCH PLIERS

Key notch for electrical push buttons; 22.5mm or 30mm hole

- Easy and quick punching of notches in sheet metal up to 3mm thickness
- No time-consuming filing of the notches for twist guards of push buttons, switches and instruments
- Can notch 3.2mm or 4.8mm (by turning the punching head 180 degrees)
- Long tool-life due to both punch & die are made of hardened tool steel
- Easy punching due to high lever transmission; plastic-laminated handles
- Weight; 1.3kg

Punch to be inserted in the pre-punched opening, to be adjusted and pressed against the edge of the drill hole; actuate the pliers now and you have a cleanly punched notch.
