Made In Italy

430 DE T34 Concrete Crusher

The model 430 DE T34 concrete crusher is designed to suit smaller excavators, being most useful in demolition applications where smaller excavators can be used in confined spaces with limited access. The unit allows the crushing of concrete and masonry walls up to 430mm in thickness, which allows demolition to be accomplished with little noise, dust and vibration to the work areas environment .

This unit is most suited for operation in urban areas where authorities can require this system for environmental purposes with less pollution and noise factors. The 430 DE T34 can be fitted to any excavator as it can be supplied with the appropriate fittings to suit the customer's desired model of excavator. The 430 DE T34 weighs in at just 175kgs and features a patented Jaws operating system.

This crusher has the capacity to also cut 28mm rebar rod due to its well designed inbuilt cutter. This unit is precision manufactured and designed in Italy by Edilgrappa.

| Specifications | Model 430 DE T34 |
|------------------------------------|----------------------------------|
| Maximum Material Thickness | Concrete - 430mm Rebar - 28mm |
| Maximum Operating Pressure | 200 Bar |
| Cutting Power | 920 kN |
| Dimensions | 748 x 728 x 322mm |
| Rotation Angle (Free Wheel) | 360° |
| Maximum Jaw Opening | 431mm |
| Jaws Depth | 185mm |
| Weight | 175Kgs |
