

EDILGRAPPA

Made In Italy

RD8-20EL Hydraulic Rebar Straightener COD. 1.50.2022

Edilgrappa RD8-20L hydraulic rebar straighteners are portable hydraulic tools designed for plant operators to straighten coiled wire or rebar material easily. Edilgrappa specifically developed the RD8-20L for use in the production of rebar, round bar and wire products in the wire industry.

Being of lightweight design, the RD8-20L is extremely portable with a capacity of 8mm to 20mm diameter rebar or wire. The OH&S compliant portable rebar straighteners feature a unique double-acting hydraulic operation for the ram enabling the unit to have an 'inching' operation for the forward and reverse directional operation with push button controls, being designed for 24 Volt control operation. This unit can be attached and operation with a spring balancing system.

The RD8-20L can be ideally used with Edilgrappa's wide range electric / petrol powered hydraulic power packs. This unit is designed and precision manufactured in Italy.

<u>Specifications</u>	Model RD8-20L Hydraulic Rebar Straightener
Maximum Material Thickness	20mm High Tensile Rebar
Maximum Operating Pressure	5 Ton / 380 Bar
Weight	9.4Kgs

**FOR PROFESSIONALS THAT NEED TO STRAIGHTEN
TENSILE REBAR**
