

RD8-20 Cordless Hydraulic Rebar Rebar Straightener

Innovators in
Precision Rebar
Bending Tools &
Equipment

The RD8-20 cordless rebar and wire rope straightening range are fully portable hydraulic tools designed for simple straightening of coiled wire materials such as hard drawn copper, twisted copper wires, wire rod material and wire ropes.

The RD8-20 was specifically developed for use in factory environments and on-site applications to provide the operator a more user-friendly and ergonomic experience. The tool delivers a high level of safety for above ground work situations with aerial conductors.

Being WH&S compliant, the RD8-20 straightener has a unique double-acting hydraulic operation with the ram enabling the unit to have an 'inching' operation from the forward and reverse directional operation trigger switch, allowing full control for the operator to straighten the material more easily. The RD8-20 is designed & precision made in Italy to the highest of ISO9000 commercial standards.
