

Stainelec SP-100 Stud Puncher

Innovators in
Precision Steel
Frame & Stud
Punching Tools

The SP-100 Stud Puncher is suitable for electricians, plumbers, air conditioning installers and all trade contractors requiring to punch holes in steel studs for construction projects or housing and commercial electrical installation work.

Featuring a user friendly design, this tool will punch the standard size holes of 25.4, 28 & 32.2mm which are common for the Australian market. These hole sizes will accept PVC grommets which are available from electrical wholesalers that are stockists of conduit and cable bushes and grommets.

Weighing just 3.5kgs the SP-100 stud punch is designed to punch up to 1.2mm mild steel & 0.9mm tensile mild steel thick material. Punch and die sets can be interchanged easily when switching sizes. This unit offers the operator flexibility thanks to its user friendly design and precision made punching dies.
